White Sands of New Mexico.
The White Sands of New Mexico have at last been put into practical use. *** Experiments prove that when dry, it is almost pure plaster of paris. A cement made from the substance is equal in strength to the best made and has twenty-five per cent less weight. Bricks of half the weight of the ordinary Philadelphia pressed brick, and an equally fine appearance, have recently been manufactured from the gypsum. These bricks withstand a pressure of one thousand pounds to the square inch. Various artificial products have been made; a close imitation of ivory, a cleverly colored meerschaum, and a waterproof tiling resembling a fine imported glaze. All sorts of chalk products may be readily manufactured and many pretty pieces of pottery and souvenir trinkets of trifling value have been made in the trial experiments. A recently organized company has come into control of most of the 70,000 acres of white sand hills. It proposes to erect a mill and to manufacture products of this wonderful white pile. The brick and plaster have already found a market. —Bertha C. Crowell, in Sunset Magazine for November.

Stillwell, president of the Mexico & Orient railroad says of rebates: "Of all the crimes in the whole category the rebating crime is the most unjust. Rebating strikes at the people—the fountain head of the rights delegated to the average railroad. The hired assassin of old may be pictured as a white-robed saint compared to the rebater. Rebating is a crime for which no punishment is too severe. I'd like to see the rebater get twenty—yes, fifty—years in the penitentiary."

Senator Dolliver, of Iowa, says of Secretary Root: "Secretary Root will not do for a presidential candidate. He sits in the inner councils of the trust, is Thomas F. Ryan's right hand man, and for several years has been chief counsel in every nefarious scheme that has been foisted on the American people."

Parties were in Waverly Thursday looking over the coal fields with a view of leasing land and opening up a new mine. They expressed themselves as being well pleased at the outlook and would return later when they would take steps toward leasing and prospecting. It is just a question of time until several mines will be in operation at this place, and Waverly be classed as one of the most thriving mining towns along the old Missouri. —Waverly Times.

To make this amount of cider he required 14,000 bushels of apples. This has been a great help to the apple men of that section of the country, as the apples he used were culls and could not have been disposed of any other way.

Poisoning Power of Snakes.
Of deadly snakes, which is the most fatal? Size counts for a great deal. The venom of the cobras is more virulent than that of the vipers; nevertheless, it would be preferable to be bitten by the notorious little Indian kariat, which is no thicker than your finger, rather than by a big puff adder with a head the size of a tablespoon and fangs and poison glands to match.
